< Glossary >

- Admin, Administrator
 - A user who can enter into the terminal menu mode, he/she can register/modify/delete terminal users and change the operating environment by changing settings.
 - If there is no administrator for a terminal, anyone can change the settings. In this regard, it is recommended to register at least one administrator.
 - Caution is required with registration and operation because an administrator has the right to change critical environmental settings of the terminal.

- 1 to 1 Verification
 - A user's verification fingerprint (template) is compared to the user's enrollment fingerprint (template) previously registered. The terminal performs 1:1 matches against the user's enrolled template until a match is found.
 - It is called 1 to 1 Verification because only the fingerprint registered in the user's ID or card is used for comparison.

- 1 to N Identification
 - The terminal performs matches against multiple fingerprints (templates) based solely on fingerprint information.
 - Without the user's ID or card, the user's fingerprint is compared to fingerprints previously registered.

- Authentication level
 - Depending on the fingerprint match rate, it is displayed from 1 to 9. Authentication is successful only if the match rate is higher than the set level.
 - The higher the Authentication level, the higher the security. However, it requires a relatively high match rate, so Authentication is vulnerable to failure.
 - 1:1 Level: Authentication level used for 1:1 verification
 - 1:N Level: Authentication level used for 1:N identification

- Authentication Method
 - This represents the various types of authentication, including Face authentication, FP (fingerprint) authentication, RF (card) authentication or a combination of these methods. Example: Face or FP: Authentication with face or fingerprint

- LFD (Live Finger Detection)
 - This function allows the input of only real fingerprints and blocks the input of imitation fingerprints produced using rubber, paper, film, and silicone.

1. Before use

1.1. Safety precautions

● Warning

<p>Handling with wet hands or allowing liquid to flow into it is prohibited. -> It may cause an electric shock or damage.</p>		<p>Do not place a fire source near the terminal. -> It may cause a fire.</p>	
<p>Do not disassemble, repair, or modify the terminal at discretion. -> It may cause an electric shock, fire or damage.</p>		<p>Keep out of reach of children. -> It may cause an accident or damage.</p>	

- If the above warning is ignored, it may result in death or serious injury.

● Cautions

<p>Keep away from direct sunlight -> It may cause deformation or color change.</p>		<p>Avoid high humidity or dust -> The terminal may be damaged.</p>	
<p>Avoid using water, benzene, thinner, or alcohol for cleaning -> It may cause an electric shock or fire.</p>		<p>Do not place a magnet close to the terminal. -> The terminal may break down or malfunction.</p>	
<p>Do not contaminate the fingerprint input area. -> Fingerprints may not be well recognized.</p>		<p>Avoid using insecticide or flammable spray near the terminal. -> It may result in deformation or color change.</p>	
<p>Avoid impacts or using sharp objects on the terminal. -> The terminal may be damaged and broken.</p>		<p>Avoid severe temperature changes -> The terminal may be broken.</p>	

- If the above cautions are ignored, it may result in property loss or human injury.

※ Under no circumstances will UNION COMMUNITY be responsible for accidents or damages caused by inappropriate use of the product without referring to the user manual.

1.2. Specific names of the terminal

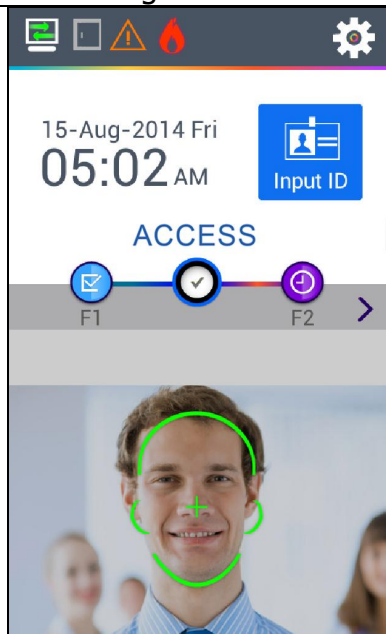

1.3. Window after operation

1.3.1. Icon

① Fire detection	None	: Normal
		: The state in which the fire sensor is recognized (When the fire detector is connected)
② Warning indicator	None	: Normal
		: Abnormal state such as separation of the terminal or entrance disability
③ Entrance state		: Do not know about the entrance state
		: The entrance is closed
		: The entrance is open
④ Server connection state		: LAN line is not connected
		: Not connected to the server program
		: Connected to the server program

1.3.2. Message

- Basic window

- When authorization is successful

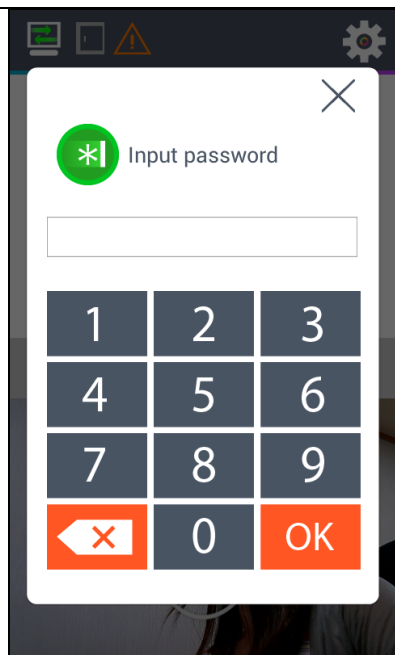

- When authorization is failed.

- When unregistered user ID is entered.

 <p>Unregistered Card!</p>	<p>- When unregistered card is entered</p>
 <p>Passback error!</p>	<p>- Passback error when using anti-passback function.</p>
 <p>Duplicated!</p>	<p>- When a user tried the authorization more than twice in one meal time when using as meal personnel management</p>
 <p>Network Error!</p>	<p>- When the server does not respond during the authorization attempt to the server - When the network is disconnected during the authorization attempt to the server</p>
 <p>No permission!</p>	<p>- Registration without authorization right or authorization attempt when the entrance is not permitted.</p>
 <p>Restricted!</p>	<p>- When the user is designated in the blacklist</p>

	<p>- When the terminal is set locked</p>
	<p>- When it is not the meal time when set in the meal personnel management.</p>
	<p>- The state waiting for the input of the user ID</p>

- The state waiting for the input of password

- The state waiting for the input of fingerprint

- The state waiting for the input of the card

-When the terminal program is being upgraded
(In this state, you should not turn off the terminal)

1.4. Sounds in the operation

Operation type	Sound
When the authorization was successful	You are authorized.

When the authorization was failed.	Please try again.
------------------------------------	-------------------

1.5. Beep sound in the operation

Pick	Sound at the reading of fingerprint card	When the card was read When the fingerprint was entered in the fingerprint window
Pi-pick	When failed	When the authorization was failed
Pi~ik~	When succeeded	When the authorization was successful

1.6. How to register and authorize the face properly

- Face registration method

- Maintain the distance between the terminal and face in about 50 cm. (Locate the face in the guide line of LCD window)
- Register the face pose along with the guidance. During the shooting, please maintain the attention.
- When registering the face, register after sweeping your hair up not to hide the eyebrow or lower face with your hair or hat (Passport picture standard).
- If you wear the glasses, you should register both pictures with and without glasses. But, if you change your glasses, you should repeat the registration procedures.

- Face authorization method

You can select three modes as the face authorization method.

- Normal mode: When the user gets close within 1.5m, the tilting function of the camera is operated by recognizing the face of user. When the user is within 50~70cm, the face authorization is fulfilled.
- Fixed mode: It has the fastest authorization speed, but because it does not include the tilting function, please locate the user face at the LCD guideline by maintaining the distance between the terminal and user in 50 cm.
- Adaptive mode: When the user accesses within 3m, the camera is tilted along with the location of user's face. When the user is within 50~70cm, the face authorization is fulfilled.

- Notes

- It is recommended to register and authorize at the location where the terminal is installed.
 - If you pose differently with the registered face, the recognition rate of face can decrease. It is good to locate the full face as much as possible
 - The thick glasses frame or sun-glasses can decrease the recognition rate of face
- Cautions in the installation
 - Be sure to install the terminal indoor.
 - Do not install under the light bulb.
 - Not recommended in the circumstance of backlight or direct light.

1.7. Correct fingerprint registration and input methods

- Correct fingerprint registration methods

Place your index finger on the window just as you do with a finger stamp.
Do not use the tip of the finger.
Make sure the center of your finger touches the window.

- Use your index finger if possible, it is the easiest for orientation and guarantees a stable input method. Using the thumb or baby finger can be awkward and may result in a bad image.
- Check if your fingerprint is unclear or damaged.
It is tricky to recognize fingerprints on dry, wet, unclear, or injured fingers. Use another finger in this case.

- Be aware of certain fingerprint conditions

Depending on the user's fingerprint condition, some fingerprints may not be used or may cause an inconvenience.

- If the fingerprint is damaged or very unclear, then it cannot be recognized. Please use a password instead in this case.
- When a finger is dry, breathe on the finger for smooth operation.
- For kids, it may be tricky or impossible to use the terminal because their fingerprints are too small or very unclear. It is recommended to register their fingerprints every six months.
- For the elderly, it may not be possible to register their fingerprints if there are too many fine lines on the fingerprints.
- If fingerprints are very unclear, it may be convenient if you register 2~3 fingerprints.
- It is recommended that you register more than 2 fingerprints.

2. Product introduction

2.1. Product characteristics

- Multi-Modal product with which the user can use both face and fingerprint authorization functions together.
- Authorization by automatic tracing the location of face with tilting camera
- The face recognition is possible even in the dark place with the illumination sensor and dual camera (color & IR) and saving the discriminable log images.
- RF (125kHz) and smart card (13.56MHz) can be used at the same time.

- Easy authorization with the face or fingerprint
 - Can prevent the hazard factors such as forgetting password, losing the card or key, or stealing with the biometrics such as face and fingerprint recognition and increasing the safety with using the person's own bionic information.

- Entrance management system with using LAN
 - Easy expansion by direct applying to the previous network because it communicates with using TCP/IP protocol between the fingerprint recognition terminal and authorization server. High speed with 10/100 Mbps Auto Detect and easy management and monitoring with network.

● Various registration and authorization methods

Face		Face registration Face authorization
Fingerprint		Fingerprint registration Fingerprint authorization
Card		Card registration Card authorization
Password		Password registration Password authorization
Card fingerprint	or	Card, fingerprint registration Card or fingerprint authorization
Card fingerprint	&	Card, fingerprint registration Fingerprint authorization after card authorization
Card password	or	Card, password registration Card or password authorization
Card password	and	Card, password registration Password authorization after card authorization
Fingerprint password	or	Fingerprint, password registration Password authorization when fingerprint authorization was failed
Fingerprint & Password		Fingerprint, password registration Password authorization after fingerprint authorization

Card or face	Card, face registration Card or face authorization
Card & face	Card, face registration Face authorization after the card authorization
Face or password	Face, password registration Face authorization or password authorization when the face authorization was failed after ID input
Face & password	Face, password registration Password authorization after face authorization
Fingerprint or face	Fingerprint, face registration Fingerprint or face Authorization, face authorization when fingerprint authorization was failed after ID input
Fingerprint & face	Fingerprint, face registration Face authorization after fingerprint authorization or fingerprint authorization after face authorization
Card, fingerprint, or face	Card, fingerprint, face registration Face authorization when the fingerprint authorization was failed after the input of card, fingerprint, face authorization, or ID.
(ID or card) & Fingerprint	Card, fingerprint registration Fingerprint authorization after ID input or fingerprint authorization after card authorization
(ID or card) & password	Card, password registration Password authorization after ID input or password authorization after card.
(ID or card) & face	Card, face registration Face authorization after ID input or face authorization after card authorization
Card & fingerprint & password	Card, fingerprint, and password registration Fingerprint and password authorization after the card authorization
Card & face & password	Card, face, and password registration Face and password authorization after the card authorization
Card & fingerprint & face	Card, fingerprint, and face registration Fingerprint and face authorization after the card authorization
Fingerprint & face & password	Fingerprint, face, and password registration Face and password authorization after the fingerprint authorization
Card & fingerprint & face & password	Card, fingerprint, face, and password registration Fingerprint, face and password authorization after the card authorization

2.2. Product components

2.2.1. Single use (entrance)

2.2.2. Connected with PC server (entrance, attendance, meal personnel management)

2.3. Product specification

Types	SPEC	REMARK
CPU	1GHz Quad Core CPU	
LCD	5.0 inch Touch LCD(480*800)	
MEMORY	4G + 8G Bytes Flash	
	2GBytes RAM	
External SD Card support	Data backup / FW upgrade	
Camera	Tilted Dual Camera (Color & IR)	
Authorization speed	Within 1 sec	
User number	250,000 User / 250,000 Card 250,000 Finger (1:N→1:25,000) 10,000 Face (1:N→1:2,000) 10,000,000 Log / 20,000 Image Log	
Fingerprint sensor	Optical	
Scan Area / Resolution	20 * 20mm / 500 DPI	
Temperature / Humidity	-20 ~ 45 / Lower than 90% RH	
AC / DC Adapter	INPUT : Universal AC100 ~ 250V	
	OUTPUT : DC 12V (Option : DC 24V)	
	UL, CSA, CE Approved	
Lock Control	EM, Strike, Motor Lock, Auto Door	
I/O	4 In (1 Exit, 3 Monitor) 2 Out (Also for Lock Control)	
Communication Port	TCP/IP (10/100Mbps)	Authorization server communication
	RS-232	Meal ticket printer
	RS-485	Controller communication
	Wiegand In/Out	Card reader or Controller communication

Card Reader	125KHz RF / 13.56MHz Smart simultaneous use (1 Sam socket) HID 125K Prox card (option) HID iClass Card (option)	option
SIZE	88.0mm * 175.0mm * 43.4mm	

3. Environment setting

3.1. Checks before setting the environment

3.1.1. Entering the menu

If you click the [⚙️] icon at the basic window, you can enter the main menu window as follows.

You can enter the subdivision menu by clicking each button.

<Fig. 3-1>

3.1.2. Administrator authorization

If the administrator is registered, the following administrator authorization window appears first.

► Administrator authorization

If you enter the administrator ID, the administrator authorization is fulfilled along with the authorization method of the administrator such as card, fingerprint, face, or password.

The administrator authorization only appears when the registered administrator exists. The authorization is fulfilled only once when entering the menu mode and you can access to all the menu until you quit the main menu.

<Fig. 3-2>

3.1.3. How to enter the menu without administrator authorization

It is how to enter the menu when the fingerprint or face authorization is impossible because the administrator card registered in the terminal was lost or there is no administrator.

- ① Open the cover by removing the bracket at the backside of the terminal
- ② With the opened cover, connect the 5pin connector number 1 with 3, and 2 with 4 at the bottom of the backside of the terminal.

<Fig. 3-3>

- ③ Click the icon  at the basic window to enter the administrator authorization window in <Fig. 3-2>, and fill the administrator ID with '0' and click [] button, then you can enter the menu window.

► Be sure to remove the connection pin of the connector after modifying the setting value.

3.1.4. How to save the set values

If you click the [Complete] button at each menu to save the changed value after the change of settings, the set value of the window is saved and the following message box appears.

<Fig. 3-4>

- ▶ If there is no changed value, the window is moved to the previous menu.
- ▶ If there is no signal for 30 seconds while changing the set value in the menu, the window is moved to the previous menu.

3.2. Menu composition

1.User management	1. Addition 2. Change 3. Deletion 4. Whole deletion 5. Search	
2. Network	Terminal IP address	Static IP / DHCP ▶ Terminal IP address ▶ Subnet mask ▶ Gateway
	DNS server	▶ DNS server 1 ▶ DNS server 2

3.3. Users management

When you select the **[Users management]** at the main menu, the following window appears.

The number of all the users is shown at the top of screen including administrator.

Click [Add] button to add the new user, [Modify] button to modify the user, [Delete] button to delete the specific user, [Delete All] button to delete all the users, and [View] button to inquire the registered user list.

3.3.1. Addition

If you select **[User management]->[Add]** in the main menu, the following screen appears

Input the user ID to be registered and click [OK] button.

In this case, the ID which can be registered is shown on the screen automatically, so you can register conveniently. If you want to change ID, delete the previous value by clicking [X] button and input the new value.

Click [Back] button to cancel and go back.

If you enter ID which is already registered, the failure message appears, and if the ID is not registered, the following screen appears.

The icons in the left side mean as follows.

: The number of registered faces

: The number of registered fingerprints (X,1~10)

: Existence of password registration (X:no registration, O:registration)

: The number of registered cards (X,1~10)

ID : 4 : User ID to be registered

관리자 사용자 : User

관리자 사용자 : Administrator

button: Registration with taking a picture of the user.

You can register the name with [Name], fingerprint with [Fingerprint], face with [Face], card with [Card], and password with [Password] button. The registration is basically set to be user, and it is can be changed to administrator if you click [Admin] button. **Click [Save] button to save the registration**, and click [Cancel] or [Back] button to cancel the registration and return.

※ Only user who is registered as administrator can change the operating method of the

terminal and can register/modify/delete the information of all the saved users, so be careful to register the administrator.

3.3.1.1. Photo registration

Register by clicking [📷] button at the [Add user] screen.

Click the [Save] button to register with the present camera image.

Click [Cancel] or [BACK] button to cancel the registration and return.

3.3.1.2. Name registration

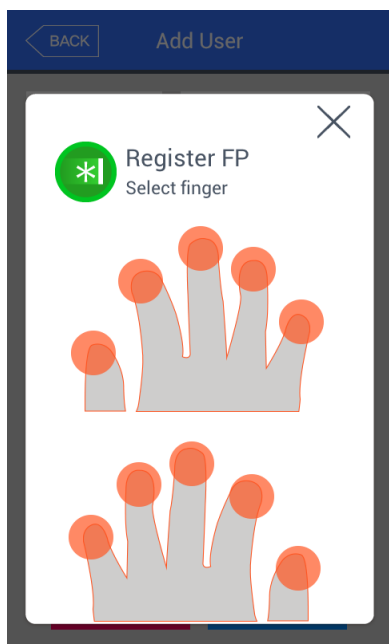

Register by clicking [Name] button in the [Add user] window.

After entering name with the under keyboard, click OK button.

Click the [X] button to cancel the registration and return.

3.3.1.3. Fingerprint registration

① Register by clicking [Fingerprint] button at the [Add user] screen.
 Click [X] button to cancel the registration and return.
 Choose the finger to be registered when the left screen appears.

※ If you register the multiple fingers, the fingers already registered are represented by blue circle (●). If you select the finger already registered, the following message appears, and if you select the re-registration, you can register again with deleting previously registered fingerprint.

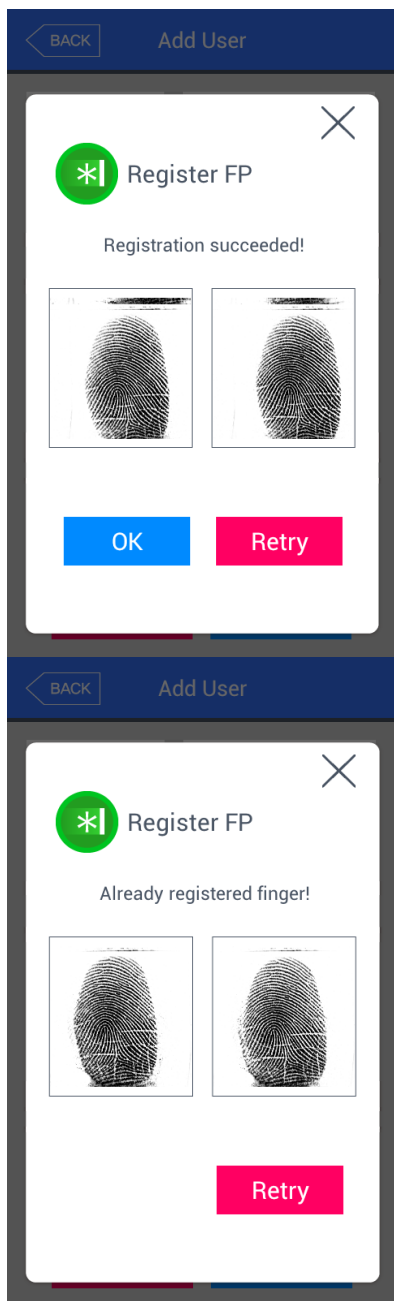

② Enter the fingerprint with referring '1.7 Proper fingerprint registration and input methods'. Enter the fingerprint twice according to the screen instruction as follows.

When the light is turned on at the fingerprint sensor with the message 'Register FP', put your finger on the input screen and wait for 2~3 seconds until the light is turned off.

③ When the message 'Enter the same fingerprint again' appears, enter the same fingerprint again.

※ In the second fingerprint input after the first fingerprint, you should take off your finger from the screen once and input again.

④ The message of the left side appears when the input is completed. If you click [OK] button, the registration is completed and the screen is returned to the upper menu.

If it is similar with the fingerprint already registered, the message "Already registered finger!" appears like the left side, and you can start again from the procedure of ② if you click the [Retry] button.

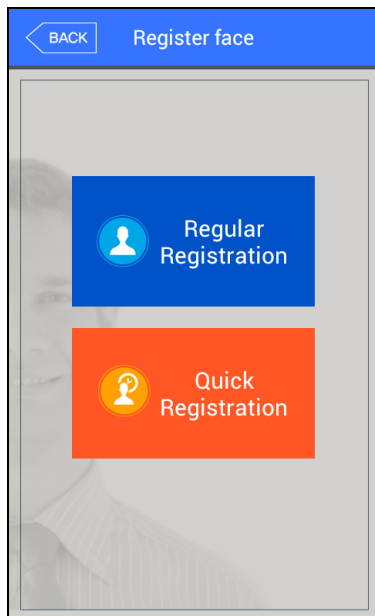

You can click [X] button to cancel and return to the upper menu.

※ You can register 10 fingerprints at most for one ID, and you cannot register more than 10 IDs.

If the registration was failed 2~3 times despite the proper fingerprint registration method, it is recommended to use face, password, or card.

3.3.1.4. Face registration

Register with referring '1.6. How to register and authorize the face properly '

① If you press **[face]** button on the **[Add user]** page, you can select either **[Regular Registration]** or **[Quick Registration]**

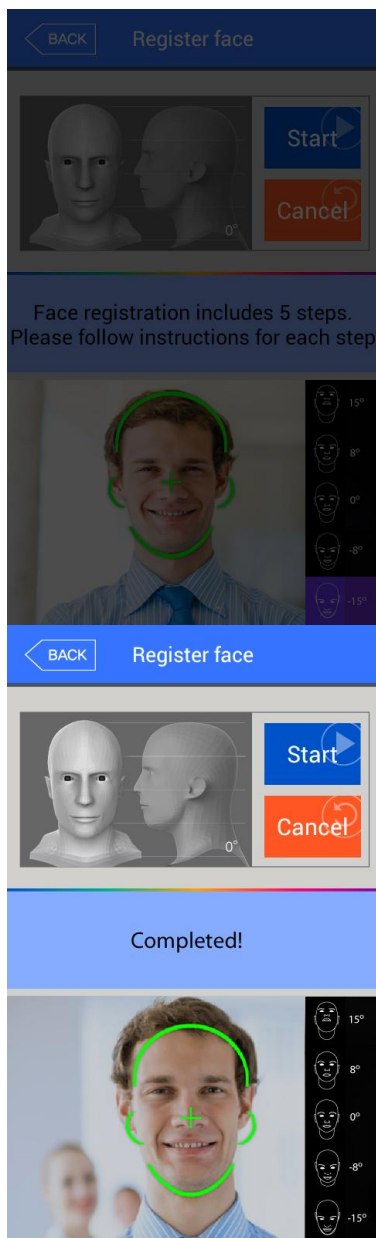

If you wish to cancel the enrollment, press the **[BACK]** button

*Registration follows the guideline which enrolls the face in 5 steps after the face and the posture is fixed.

*Quick Registration enrolls the face in 3 steps using the auto face search function, which enrolls the face when the face area is detected.

② Locate your face to be fitted to the face lines like the left picture, and look directly at the screen according to the guidance of the screen.

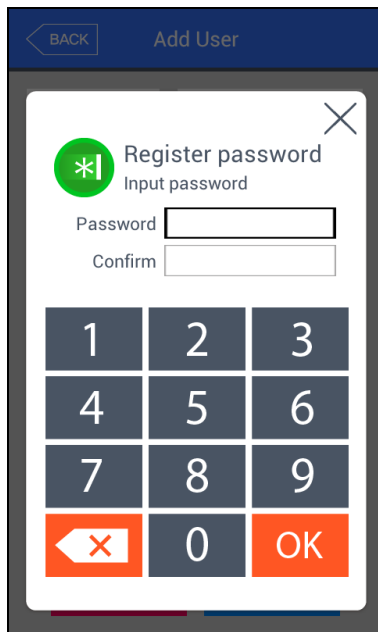

③ If the face was recognized properly like the left picture, the guide is turned green and the face registration begins. At this point, you should maintain the stopped state without moving face for the better registration.

④ Move your face slightly directly, upward, or downward according to the direction of the screen. At this point, please do not move more than 15° .

When the registration is ended, the message [Completed!] appears like the left screen, and if you click the [OK] button, the face registration is completed and the screen is moved to the previous screen.

If you want to register again, click the [OK] button to start from the procedure of ②

3.3.1.5. Password registration

If you enter the password in 1~8 characters into the password input window and click [OK] button, the input focus is moved to the 'password confirm' window at below. Enter the same password again and click [OK] button.

Click [X] button to cancel and return.

※ If you enter the different password in the confirm window, the message "Wrong input!" appears as follows.

3.3.1.6. Card registration

Register with clicking [card] button in the [Add user] button. Click [X] button to cancel and return.

※ If you entered the card already registered, the following message appears

※ If a user tried over than 10 registrations, the following message appears.

3.3.1.7. Authorization option

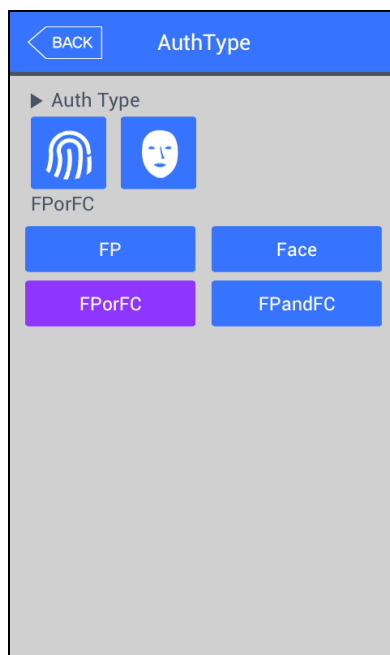

▶ 'Fingerprint authorization level' (basic setting: '0')
It decides the fingerprint authorization level of each user, and the registered users can have different authorization level by modifying this value. If you set '0', the authorization uses the level of fingerprint authorization.

▶ Enable 1:N Fingerprint authorization (basic setting: when the fingerprint is registered, [v])
If this option is checked, you can authorize only with fingerprint without user ID or card.

▶ Enable 1:N face authorization (basic setting: when the face is registered, [v])
If this option is checked, you can authorize only with face without user ID or card.

3.3.1.8. Authorization method

Set by clicking [Auth type] at the [Add user] window. (But, it can be set when there are more than 2 authorization methods registered)
Click [BACK] button to cancel and return.

At the left picture, "▶Auth Type" at the upper side shows all the authorization methods already registered, and the buttons at the lower side shows the methods which can be selected. Present authorization method is distinguished with different color.

If you click the button you want to change to, the authorization method is changed and the screen moves to the previous window.

The authorization method icons are represented as follows.

※ In case of authorization method, if it is not set, the authorization methods previously registered are set automatically. (But, if there are more than 3 authorization methods registered, the password is excluded).

3.3.1.9. Save

Click the [Save] button to save when all the registration procedure is finished. At this point, if you click [Cancel] or [BACK] button to return, the user is not saved.

Next is the LCD messages which can appear at the registration procedure.

	<p>When you clicked the [Save] button, the case registration was successful</p>
	<p>When you clicked the [Save] button, the case registration was failed : The case none of authorization methods such as fingerprint, face, card, and password is registered.</p>
	<p>When you clicked the [Auth method] button, the case none of the authorization method was registered.</p>
	<p>In [Register FP], the case you input the different fingerprint at the fingerprint registration.</p>

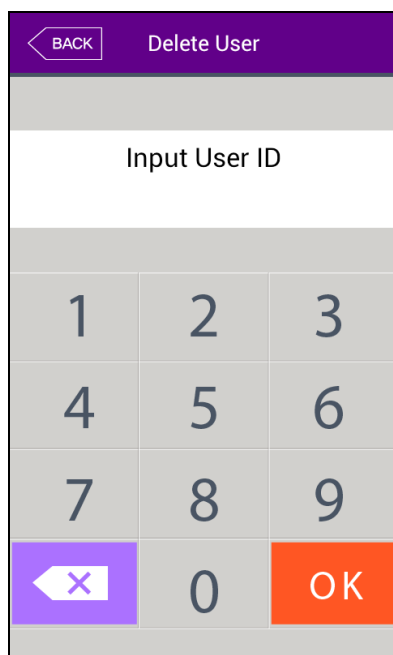

In [Register FP],

The case you tried to registered the fingerprint already registered. (But, you can input the same fingerprint with the same user ID).

※ If you want to register the same fingerprint in the different ID, you should uncheck the 'System → Fingerprint recognition → preventing the similar fingerprint registration'. But, in this case, because the same fingerprint can be authorized as different ID, it is not suitable for the attendance management.

3.3.2. Deletion

The following window appears if you click [User management]->[Delete] at the main menu.

Input the user ID to be deleted and click [OK] button.
Click [BACK] button to cancel and return.

If you input the unregistered ID, the failure message "Unregistered user" appears, and if you input the registered ID, success message "Deleted" appears.

But, the deletion in the terminal is not led to the deletion in the server, so if you want to delete completely, you should delete it also in the server.

The deletion delete both user and admin, so you should be cautious, and the user registered only in the terminal is cannot be recovered.

The followings are LCD guidance which can appear at the deletion procedure.

	<p>When it is deleted normally.</p>
	<p>When unregistered ID was entered</p>

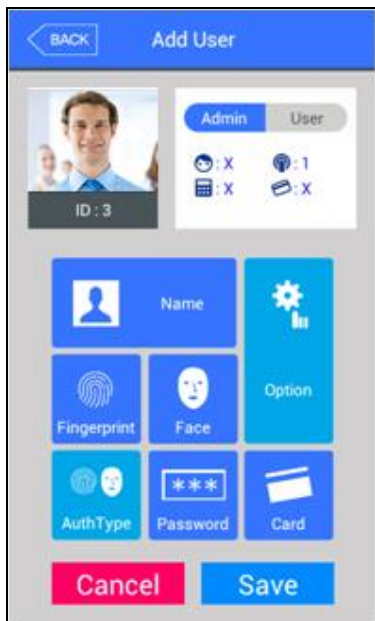

3.3.3. Modification

The following window appears if you click the [User management]->[Modification] in the main menu.

Input the user ID to be modified and click [OK] button.
Click [BACK] button to cancel and return.

The failure message appears if you input the unregistered ID, and if you input the registered ID, the information of registered user is represented as follows.

The icons at the left side means as follows.

- : The number of registered faces
- : The number of registered fingerprints (X,1~10)
- : Existence of password registration (O:registration/X:□|registration)
- : The number of registered cards (X,1~10)
- ID : 4** : User ID to be registered

Admin User : User
 Admin User : Administrator

If you touch the picture, you can register with re-taken picture.

The modification method of each item is the same with the user addition, so refer to the '3.3.1. Addition'

3.3.4. Delete all

If you click the **[User management]->[Delete all]** in the main menu, the following window appears.

If you want to delete all the users, click [YES], and if you want to cancel, click [NO].

If you click [YES], the users and admin are deleted, and the restoration is impossible once they are deleted, so be careful.

3.3.5. Search

If you click the **[User management]->[Search]** in the main menu, all the users registered can be searched as follows.

ID	Name	Admin	Card#	✓
1	james			<input type="checkbox"/>
	AuthType			
	FPorFC			
2	henry			<input type="checkbox"/>
	FP			
3	matin	V	7940E027	<input type="checkbox"/>
	FP			
5	tim			<input type="checkbox"/>
	FP			
9	mark			<input type="checkbox"/>
	PW			
10	cabin			<input type="checkbox"/>
	FPorFC			

The user list appears by the order of ID, and if you slide the screen upward, you can search the additional user list.

The list appears in the unit of 100 people and if the list is more than 100 people, you can see the previous or next list by clicking **[BACK]** or **[NEXT]** button.

▶ **[ID]**: If you click the ID of specific user, you can directly move to the modification window of the user.

▶ **[Delete]**: If you check the box of the right side and click the **[Delete]** button, you can delete all the checked users at once.

If you click **[BACK]** button on the top, you can move to the previous '3.3 User management' menu.

▶ If you input the User ID by clicking **[ID search]** button, the user is searched like in the left picture.

If you click **[BACK]** button in this window, you can move to the '3.3. User management' menu.

ID	Name	Admin	Card#	✓
5	tim			<input type="checkbox"/>
	AuthType			
	FP			

ID	Name	Admin	Card#	AuthType	✓
3	matin	V	7940E027	FP	<input type="checkbox"/>
9	mark			PW	<input type="checkbox"/>

Buttons: ID, Name, Delete

- ▶ If you input the user name by clicking [Search name] button, the registered user list including the characters is shown. If you click [BACK] button in this window, you can move to the '3.3. User management' menu.

Ex) If you searched with "ma", all the users who contain "ma" in their name are searched.

3.4. Network setting

If you select [**Network**] in the main menu, the following window appears.

Options: Static IP, DHCP

IP address: 192.168.0.3

Subnet Mask: 255.255.255.0

Gateway: 192.168.0.1

DNS: [] []

Server IP: 192.168.0.2

Port: 9870

Terminal ID: 1

Save

- ▶ Basic setting : Same with the window at the left side.

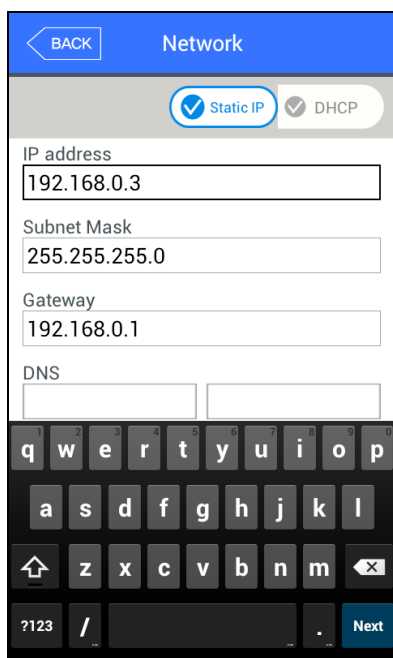

Select the method [Static IP] if the static IP is allocated from the connected network, and select [DHCP] if the IP is allocated from the DHCP server in the connected network.

If you selected [Static IP], set the IP address, subnet mask, and gateway. And if you selected [DHCP], you don't have to set them.

DNS entry is possible instead of IP in the [Server IP], and if you use specific DNS server, input the IP address of [DNS] server together. Check DN when typing DNS in order to type in English.

- ▶ [Port]: The basic port value of the authorization server (UNIS server) is '9870', and if you change the value, you should change the server program with the same value, so be cautious.
- ▶ [Terminal ID]: It is unique ID used by the terminal to distinguish the terminals and the default value is '1'. It should be the same with the ID of the terminal registered, and

the characters can be up to 9 digits.

If you touch the item you want to change, the keypad appears at the bottom.

If the input is finished with the keypad, continue the input by touching [↩] button or the next input window. If you touch the background window which is not the input window, the keypad disappears.

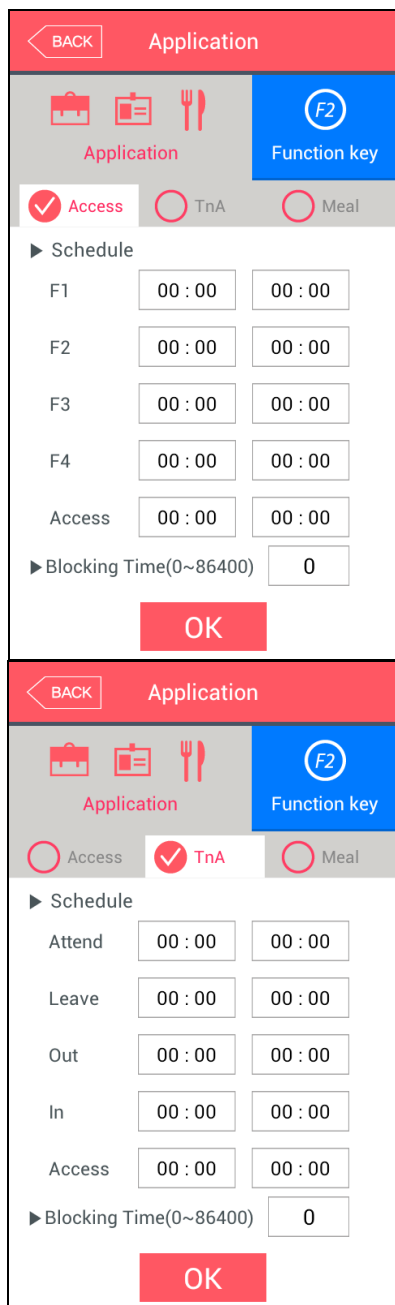

If you want to apply the changes, click [Complete] button, and return to the previous menu by clicking [BACK] button.

3.5. Application mode

3.5.1. Application mode

If you select the **[Application mode]** in the main menu, the following window appears. In the application mode, you can select the **[Entrance control/ Attendance management/ Meal personnel management]** according to the purpose.

3.5.1.1. Entrance control or attendance management setting

It is the screen appearing when you select the Access.

Click [OK] button to apply the changes, and click [BACK] button to cancel and return.

▶ Basic setting : Same with the window at the left side

It is the screen appearing when you select the [TnA].

Click the [OK] button to apply the changes, and click [BACK] button to cancel and return.

▶ Schedule setting (00:00~23:59): You can set the time for each authorization mode and if you do not need the function, set '00:00-00:00'. During the set time, the set mode is always shown unless clicking another function button, and it is convenient for the TnA management because the indication mode is changed to the set authorization mode automatically though another mode was authorized by clicking another function key. The time periods should not be overlapped, but if they are overlapped, the application order is Attend->Leave->Out->In->Access. If the time is set between 23:00~01:00, it means from 23:00 to the 01:00 the following day.

▶ Blocking time: This function prevents the same user to authorize again in the set time. There is no restriction if it is set 0, but if it is set bigger than 0, the user can authorize

again when the set time (sec) is passed from the previous authorization. It can be set up to 86,400 seconds (24 hours).

3.5.1.2. Meal personnel management setting

It is the screen appearing when selecting the meal management.

You can set the time period of each meal type. And if the setting is not needed, set '00:00-00:00' .

- ▶ Allow duplicate: If it is unchecked() , each user can authorize once in the one meal, but if it is checked() , the multiple authorization is possible regardless of the previous authorizations.

Click the [OK] button to apply the changes, and click [BACK] button to cancel and return.

3.5.2. Function keys

The following window appears if you select the **[Application mode] -> [Function key]** in the main menu.

- ▶ Basic setting : Same with the window at the left side

▶ Fn key
It means the [F1]~[F4], Access button used to change the authorization mode such as attendance and leaving, and if you click the fn key, the authorization mode is changed to the mode. Because only the checked buttons are represented on the basic window, you can use with unchecking other function keys when using as device only for the attendance or leaving.

- ▶ The expended key is the function by which you can expend the keys when you need the additional authorization mode besides the basic function keys ([F1]~[F4], [Access]). Check the [number of the extension function key] to use the extended key, and the number can be set 4, 8, 12, 16, 20, 24, 28, 32, 36, and 40.

Click [OK] to apply the set value, and click [BACK] button to move to the previous menu.

3.6. System

3.6.1. System

The following window appears if you select the **[System]->[System]** in the main menu.

► Basic setting : Same with the window at the left side

► User ID Length

It sets the length of the user ID, and it can be 2~9 characters and should be the same with the length of the registered ID of the server program. If the ID registered in the server program uses '000075' as a 6 digits ID, set 6.

► Authentication

It determines the priority of the authorization between the terminal and network server, and AC7000 only supports the terminal authorization method. It only authorizes the user registered in the terminal, and the authorization result is sent to the server in real time if connected with the server.

► Mandatory registration items

It determines the items which should be entered in the user registration, and the user can be registered when all the checked items are entered. The number of registered fingerprints is only valid when the [Fingerprint] is checked.

Click [OK] button to apply the set value, and click [BACK] button to cancel and return. If you click the OK button without changing the set value, it is moved to the upper menu directly. Click the menu button at the left side to set additionally.

3.6.2. Fingerprint recognition

The following screen appears if you select the **[System]->[Fingerprint recognition]** in the main menu.

▶ Basic setting : Same with the window at the left side

▶ 1: N level (3~9)

It is the authorization level used in the 1:N Fingerprint authorization. In case of 1:N authorization, the authorization level is not set for each user, so the authorization level of the terminal is always the standard.

▶ 1:1 level (1~9)

It is the authorization level used in the 1:1 Fingerprint authorization. But, in case of the user whose 1:1 authorization level is not set '0' (using the authorization level of the terminal), it follows the 1:1 authorization level of the user.

▶ Face fingerprint detection

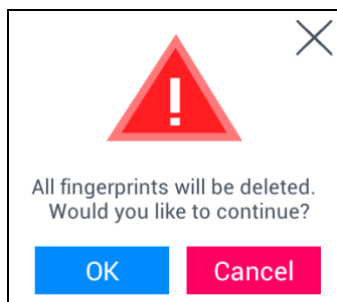

It sets the LFD level to prevent the fake fingerprint input. The higher level of the LFD level, the preventing function of the fake fingerprint input such as rubber, paper, film, or silicon is strengthened, but the fingerprint also can be hard to enter if the finger is dry too much.

▶ Fingerprint template format

It determines the format of fingerprint template. When some applications using SDK need another format of the fingerprint, the fingerprint template format of the terminal can be changed. But, if using UNIS server, it should be set the same with the template format of the server.

- Union: It is the default setting and the volume is 400 bytes for each template. It is the most optimized format related with all the functions using fingerprint (1:1 level, 1:N level, authorization speed, and fake fingerprint detection), and the authorization can be fulfilled rapidly and correctly.
- ISO Standard: Fingerprint data is saved as ISO template which is 500 bytes for each template
- ISO Extended: Fingerprint data is saved as ISO template which is 600 bytes for each template

If you change the template format of the fingerprint, the following message box appears.

If you click the [OK] button, the new format is applied, and if you click the [Cancel] button, the format value before the change is maintained.

※ Cautions: If you change the fingerprint template format, all the registered fingerprints are deleted, so be cautions.

▶ Preventing similar Fingerprint registration

If it is checked () , the re-recognition as another user ID is prevented by checking if the fingerprint is already registered. Similar fingerprints are checked against users who ticked the 1:N option. (25,000 fingerprints limit)

▶ Multiple fingerprint authorization

If it is checked () , all the registered fingerprints should be authorized after the ID (or card) input. If it is checked, the user should input the user ID or card, [Enable 1:N Authorization] is unchecked automatically.

It is the function used when managing the access control of the special area strictly. For example, if the user with ID '0001' has three fingerprints registered, the user should be authorized with all three fingerprints after entering ID. In this case, the order of three fingerprints is not important, but if one of the fingerprints is failed to be authorized, the authorization is failed.

▶ 1:N Authorization permission

If it is checked () , the user can be authorized only with the fingerprint without user ID or card. Though the user is registered by enabling 1:N authorization, in the terminal where the option is not checked, only the 1:1 authorization is possible.

Click [OK] button to apply the set value, and click [BACK] button to cancel and return. If you click [OK] button without changing the set value, it is moved to the upper menu automatically.

3.6.3. Face recognition

▶ Basic setting : Same with the window at the left side

▶ Authorization level

It is the level used in face authorization, and it can be set 1~4 stages according to the accordance degree with the registered face. And the authorization is successful when the accordance degree is higher than set authorization level.

If the authorization level is higher, the security level will be higher, but you also can fail to authorize easily due to the high requirement for the accordance level.

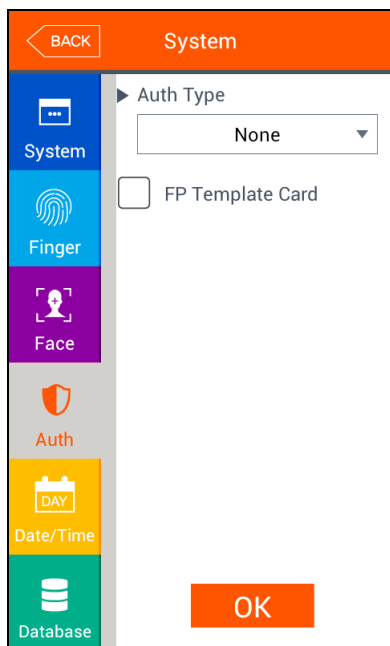

▶ Face recognition mode

It determines the face authorization method, and you can set along with the using condition. The specific explanation about each set method can be referred in '1.6. How to register and certify the face properly' .

Click [OK] button to apply the set value, and click [BACK] button to cancel and return. If you click [OK] button without changing the set value, it is moved to the upper menu automatically.

3.6.4. Authorization

If you select the [System]->[Authorization] in the main menu, the following window appears.

▶ Basic setting : Same with the window at the left side

- ▶ Terminal authorization type: Select the authorization method of the terminal.
 - Card: Though the user is registered with the authorization method requiring the face, fingerprint, or password in addition to the card, the terminal with the checking of the item, the card can authorize by itself. For fingerprint, face or password users, follow the same authentication procedure as per normal to authenticate.
 - Fingerprint: Though the user is registered with the authorization method requiring the card, face, or password in addition to the fingerprint, the terminal with the checking of the item, the fingerprint can authorize by itself. For fingerprint, face or password users, follow the same authentication procedure as per normal to authenticate.
 - Face: Though the user is registered with the authorization method requiring the card, fingerprint, or password in addition to the face, the terminal with the checking of the item, the face can authorize by itself. For fingerprint, face or password users, follow the same authentication procedure as per normal to authenticate.

▶ Fingerprint template card

If this option is checked () , the option enables the authorization only with the user information in the card and the fingerprint without downloading the user in the terminal. To run this option, the SCard reader must be equipped, and the fingerprint

card layout should be set in the server and applied to the terminal.

Click [OK] button to apply the set value, and click [BACK] button to cancel and return

3.6.5. Present time setting

If you select the **[System]->[Date/Time]** in the main menu, the following window appears.

▶ Basic setting : Same with the window at the left side

▶ Time synchronization

It determines the synchronization method between the present time of terminal and server. If you want automatic synchronization, set [Auto], and if you want manual synchronization, set [Manual].

▶ Display format

The present time indicating method of the terminal

-yyyy-mm-dd: Order of year, month, and date.

-dd-mmm-yyyy: Order of date, month (English), and year

▶ Present date setting/present time setting

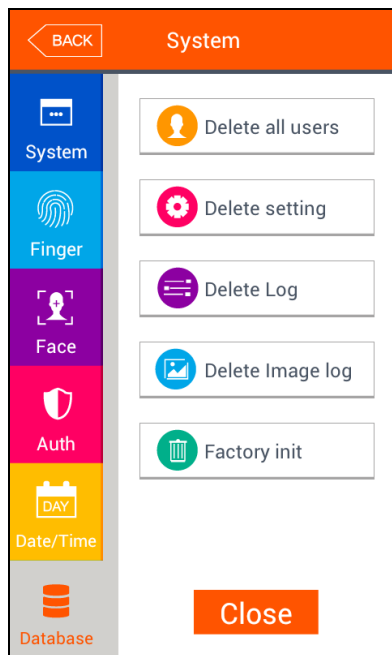

It changes the present time of the terminal. If the server is connected and the [Time synchronization] is set [Auto], you don't have to change because it is synchronized with the server time.

Click [OK] button to apply the set value, and click [BACK] button to cancel and return.

3.6.6. Database

If you select the **[System]->[Database]** in the main menu, the following window

appears.

If you want to delete all the users, click [Delete all users] button.

If you want to initialize the settings, click [Delete setting] button.

If you want to initialize the authorization record, click [Delete Log] button.

If you want to delete image log only, click [Delete image log] button.

If you want to delete all the data and initialize with the factory setting, click [Factory init] button.

If you want to move to the upper menu, click [Close] or [BACK] button.

3.6.6.1. Delete all the users

If you select the **[System]->[Database]->[Delete all the users]** in the main menu, the following window appears.

If you want to delete all users, click [YES] button, and if you want to cancel, click [NO] or [X] button.

If there is no signal for 5 seconds in this state, the message box disappears without deletion.

If deletion is successful by click [YES], the following success message box appears.

<Fig.3-5>

In this case, both the users and administrator are deleted, **and the restoration is impossible once the data is deleted.**

3.6.6.2. Delete settings

If you select the **[System]->[Database]->[Delete setting]** in the main menu, the following screen appears.

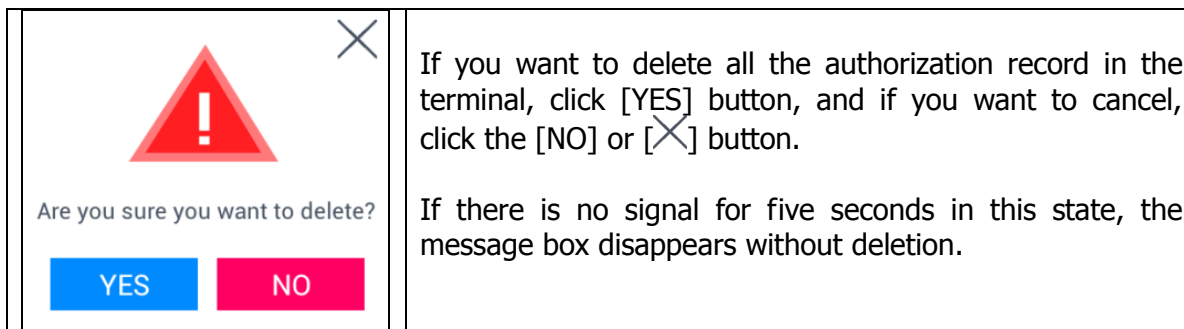

Click [YES] button to initialize all the set values, and click [NO] or [X] button to cancel.

If there is no signal for 5 seconds in this state, the message box disappears without initialization.

If the deletion is successful by clicking [YES], the success message in <Fig. 3-5> is displayed and the display language and voice is changed to the default value English. All the set value of the terminal besides the MAC address, but the record of the users and authorizations is not deleted.

3.6.6.3. Delete logs data

If you select the **[System]->[Database]->[Delete log data]** in the main menu, the following window appears.

If you want to delete all the authorization record in the terminal, click [YES] button, and if you want to cancel, click the [NO] or [X] button.

If there is no signal for five seconds in this state, the message box disappears without deletion.

If it is deleted successfully by clicking [YES], the success message in [Fig. 3-5] is displayed. All the authorization log is deleted including image log, **and the restoration after the deletion is impossible.**

3.6.6.4. Delete image logs

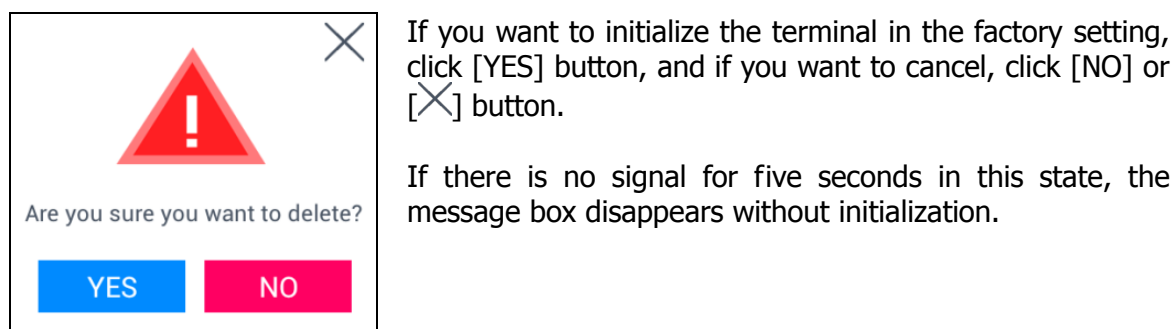

If you select the **[System]->[Database]->[Delete image logs]** in the main menu, the following window appears.

If it is deleted successfully by clicking [YES], the success message in the <Fig. 3-5> is displayed. The images saved as logs are only deleted and the authorization logs are not deleted.

3.6.6.5. Delete all

If you select the **[System]->[Database management]->[Delete all]** in the main menu, the following window appears.

If it is deleted successfully by clicking [YES], the success message in <Fig. 3-5> appears, and the display language and voice is changed to the default value English. All the set value, users and log information besides the MAC address in the terminal to make the terminal in the factory setting. **The restoration after the deletion is impossible, so be careful.**

3.7. Terminal settings

3.7.1. Sounds

If you select the **[Terminal]->[Sound]** in the main menu, the following window appears.

▶ Basic setting : Same with the window at the left side.

▶ Voice volume

Scroll from side to side in 0~15 degrees to set the voice volume. If you click the [Speaker] button at the right side, the voice is played to check the volume.

▶ Beep volume

Scroll from side to side in 0~3 degrees to set the beep volume. If you click the [Speaker] button at the right side, the beep sound is played to check the volume.

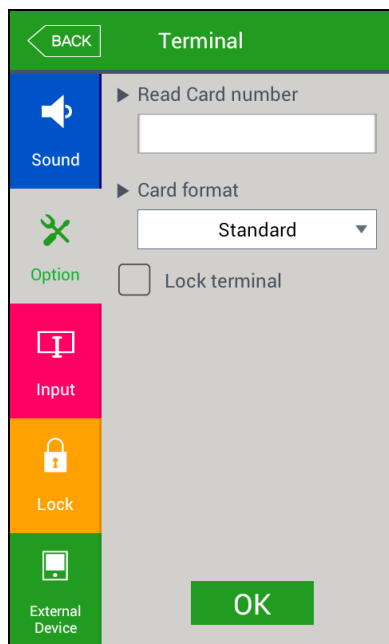

▶ User voice

If the user wants to change the voice played when the authorization is successful or failed, the user voice can be played if the user copy the sound into terminal and check the option. The method to copy the sound into the terminal can be referred in [3.10. SDcard]->[Theme] or [3.11.2 voice message modification].

Click [OK] button to apply the set value, and click [BACK] button to cancel and return. If you want to set another items, click the menu you want to change at the left side.

3.7.2. Terminal option

If you select the [Terminal]->[Terminal option] in the main menu, the following window appears.

▶ Basic setting : Same with the window at the left side.

▶ Read card number
 If the user put the card on the screen, the card number is displayed on the LCD. you can change the [Card format] to check the card number according to the set value.

▶ Lock terminal
 This function enables the administrator to lock or unlock the terminal directly on the terminal, not on the server program. If it is checked (☑), none can access due to the lock until the administrator unlock the setting.

▶ Card format

It determines the representation method of the card number. The card number is changed according to the following settings. So if you have to change the card expression method, you should register the card again.

RFcard EX) Card number(5byte): 08h 01h 16h 1Dh D6h

Card format	Card number	Expression
Standard	02207638	(3+5)digits decimal [022(16h)+07638(1DD6h)]
Hexadecimal	0801161DD6	10digits hexadecimal
10 Digit Decimal	0018226646	Posterior 4byte: 10digits decimal (01161DD6h)
3,5 Digit Decimal	02207638	Same with [Standard]
6 Digit Hexadecimal	161DD6	Posterior 3byte: 6digits hexadecimal

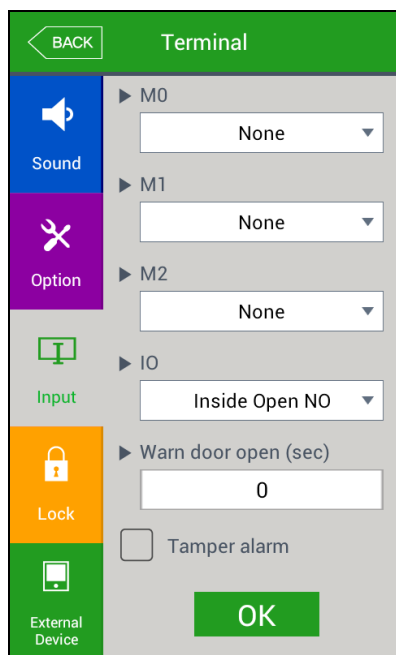

SCcard example) card number(4byte): 52h 9Dh 06h E3h

Card format	Card number	Expression
Standard	529D06E3	8 digits hexadecimal
Hexadecimal	E3069D52	8 digits hexadecimal with changing the order of byte
10 Digit Decimal	1386022627	hexadecimal 529D06E3: 10 digits decimal
3,5 Digit Decimal	3808861522	hexadecimal E3069D52: 10 digits decimal
6 Digit Hexadecimal	069D52	Locate the foremost 3bytes backwards.

Click [OK] button to apply the set value, and click [BACK] button to cancel and return.

3.7.3. Input settings

If you select the **[Terminal]->[Input]** in the main menu, the following window appears.

► Basic setting : Same with the window at the left side.

- **M0:** It is set when connecting the external access point to the DM0 (When using motor lock, set [Door open NO] or [Door open NC].)
 - None: When nothing is connected.
 - Door open NO or Door open NC: When the door open monitoring pin was connected.
 - Fire detection NO or Fire detection NC: When the fire detection sensor is connected.
 - Panic detection NO or panic detection NC': When the panic situation detection sensor is connected.
 - Emergency detection NO or emergency detection NC': When the emergency situation detection sensor is connected.
 - > Set NO/NC according to the state of pin input in detection.

- **M1/M2:** Set when connecting the external access point to DM1/DM2 (When using motor lock, set [Lock NO] or [Lock NC].)
 - None: When nothing is connected.
 - Lock NO or Lock NC: When the lock monitoring pin was connected.
 - Fire detection NO or Fire detection NC: When the fire detection sensor is connected.
 - Panic detection NO or panic detection NC': When the panic situation detection sensor is connected.
 - Emergency detection NO or emergency detection NC': When the emergency situation detection sensor is connected.
 - > Set NO/NC according to the state of pin input in detection.

- **IO:** Set when connecting the external access point to the Exit pin
 - None: When nothing is connected

- Inside Open NO or Inside Open NC: When the exit button was connected
- Fire detection NO or Fire detection NC: When the fire detection sensor is connected.
- Panic detection NO or panic detection NC': When the panic situation detection sensor is connected.
- Emergency detection NO or emergency detection NC': When the emergency situation detection sensor is connected.
- > Set NO/NC according to the state of pin input in detection

▶ Warn door open (sec)

This function alarms when set time for door open (5~30 seconds) is passed with the opened door.

If it is set [0], no alarm is ringing, and though you set [01~04], the alarm will ring after 5 seconds.

This function enables the appropriate action to close the door when someone could know that the door is not closed properly by alarming when the door is not closed for specific time.

To use the function, the lock must be able to be monitored if it is opened or closed, and the monitoring pin of the lock also should be connected with M0. In addition, the previous M0 also should be set [Door open NO] or [Door open NC].

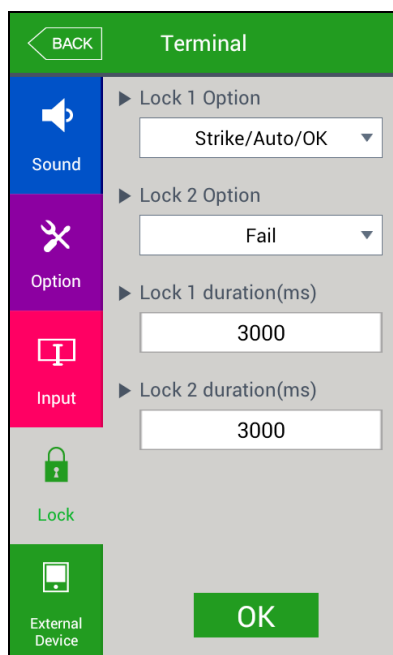

▶ Terminal disassemble warning sound

If it is checked(), a warning sound will be played when the terminal is disassembled.

Click [OK] button to apply the set value, and click [BACK] button to cancel and return.

3.7.4. Lock settings

If you select the [**Terminal**]->[**Lock settings**] in the main menu, the following windows appears.

► Basic setting : Same with the window at the left side.

► Lock1 option

- None: When it is not used
- Strike/Auto/OK: When the warning light is connected to indicate the strike type, auto door, or authorization success/failure on Lock1.
- Motor lock 1: When the motor lock is connected.
- Regular notification: When the siren setting of the terminal option was sent to the terminal, it sends the operating signal about it.

► Lock2 option

- None: When it is not used
- Authorization fail notification: When the warning light was connected to indicate the authorization failure on Lock2.
- Motor lock 2: When the motor lock is connected
- Regular notification: When the siren setting of the terminal option was sent to the terminal, it sends the operating signal about it.

► Lock 1 time (ms unit)

When Lock 1 is set 'Strike/Auto/OK', it determines the signaling time. Because it is set in ms unit, if you want to set 3 seconds, you should set 3000. The strike type means the time until the door is locked again when opening the door after authorization.

► Lock 2 time (ms unit)

It sets the signaling time when Lock 2 is set 'Authorization failure notification'. Click [OK] button to apply the set value, and click [BACK] button to cancel and return. Because it is set in ms unit, if you want to set 3 seconds, you should set 3000.

3.7.5. External terminal setup

If you select the [Terminal]->[External device] in the main menu, the following

window appears.

► Basic setting : Same with the window at the left side.

- RS232 option: It sets the device connected to RS232 port
 - None: When there is no device connected to the RS232 port
 - Ticket Format1/ Ticket Format2: The authorization result is printed when the authorization is successful. The terminal ID, user ID, authorization time, and authorization mode are printed by the printer connected to the RS232 port. The printing format differs as per the setting, and when setting as [Ticket Format2] the "text for meal printer" which was set from the terminal option, becomes the title on the top side. The printer used to print ticket is "SRP-350} serial type model.

- RS485 option: It sets the connecting device to RS485 port.
 - None: When there is no device connected to RS485.
 - LC010: When LC010 is connected.
 - LC015: When LC015 is connected.
 - SR100: When SR100 is connected.

- Site code

It sets the sitecode value sent in Wiegand output below.

- Wiegand Output

It is used only when the special controller is equipped running by the Wiegand input. When the authorization is finished, the data of the following format is sent to the Wiegand port of the terminal.

None	General case. It does not use Wiegand out port.
26bit	Because it sends "Sitecode[1byte] + User ID[2 byte]", set the user ID less or equal than 4 digits. Send example) In case of SiteCode:045(2Dh), UID:6543(198Fh) → 1 00101101 0001 1001 10001111 0
134bit	Because it sends "Sitecode[1 byte] + User ID[3 byte]", set the user ID less or equal than 7 digits. But, if the user ID is 8 digits, ignore sitecode and send only the "User ID[4byte]". Send example) SiteCode:001(1h), UID:123456(1E240h) → 0 00000001 00000001 11100010 01000000 0
User definition	It is set by the user definition, which only can be set in the server, and the setting type only can be inquired in the terminal.

Click [OK] button to apply the set value, and click [BACK] button to cancel and return.

3.8.Display settings

3.8.1. Theme

If you select **[Display]->[Theme]** in the main menu, the following window appears.

- ▶ Basic setting : Same with the window at the left side.
- ▶ The main background.
It sets the background of the basic window. You can inquire the next image by clicking [>] button.
